I

AB Orthogonally functionalized, programmable biaryl templates, e.g., I, have been synthesized utilizing aryl acetylenic stannanes and oxygenated dienes in a cycloaddn./cycloreversion strategy. Sequential functionalization of each of the four ortho positions has been demonstrated. Subsequent resolution of a representative anilino phenol has been accomplished. Addnl., a highly active anhydrous, boroxin-based Suzuki coupling protocol has been developed for conversion of unreactive aryl chlorides.
